Coming SOON.... The Interactive Land Info Online Store

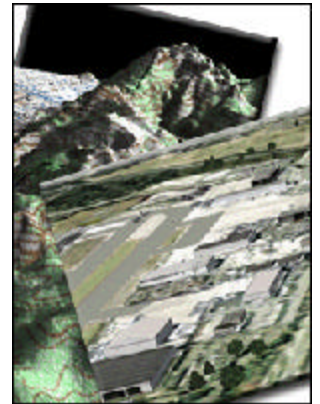

Many have been asking, "When is Land Info going to have an interactive online store?" We are happy to announce that we are in the final weeks of testing

and deployment. Soon, the ability to search Land Info's archive, order Land Info maps and GIS data will be available with the click of a button. For convenience and ease of future purchases, there will be the option of opening a Land Info customer account.

Simulation and Training - Working together with GIS

The world of GIS is moving rapidly from flat, geo-referenced images to powerful three-dimensional, motion simulations, thanks to the Simulation and Training Industry. Realistic "fly-throughs" are no longer restricted to video game experiences. Now, the Military, the Airlines Industry, Homeland Security, and civil engineers are increasingly employing 3D simulations to support planning and training objectives. The capability to train and plan in a virtual environment, with accurate data presents a tremendous cost savings to many customers.

Land Info is a leading provider of international GIS data and we are working with several clients on custom 3D simulation databases. The type of data that is most commonly used with 3D Simulators is High Resolution Digital Elevation Models (DEMs) and Vector features, and Satellite Imagery. [Contact](#) Land Info about your Simulation Project and we'll be able to assist you with recommending the best data solution for your project needs.

Land Info's DEM production process is designed to maximize the ability to integrate its DEMs with vector feature data, such as roads, hydrography, and landmarks. Since all these layers are produced from the same source topographic map, the seamless integration is extremely accurate. Additionally, LAND INFO data undergoes a strict quality control process. Each product is validated for accuracy - The end result is a high-resolution, accurate database ensuring success on all of your projects.

Land Info Announces New Management Team

(DENVER, CO – USA) Land Info International, LLC, a leading provider of worldwide geospatial & digital mapping services, has announced changes within the management team, effective immediately. The company has named [Mukul Mehta](#) Chief Executive Officer and Chairman, [Kevin Kuluvar](#) as General Manager, and [Terry Ryan](#) as Director of Sales.

Kevin Kuluvar quoted, "These changes are designed to maximize the efforts of Land Info to maintain it's commanding leadership. These changes will also guarantee the commitment we have to our clients, and will not only remain

consistent with current customer service practices, but will push them above and beyond normal industry standards.”

Germany Data Set

Land Info now has high quality GIS base data of Germany, ready for immediate delivery. This data set consists of high resolution DEMs, roads, hydrography, contour vectors, and trails.

Middle East Data Set

Due to the situation in the world, data of the Middle East is in high demand. If you have a project that requires data for Iraq, Iran, Kuwait, Saudi Arabia, Afghanistan, Syria, Jordan, Yemen, Oman, UAE, Bahrain, Pakistan and Israel, then Land Info can help you.

Mexico Base Data

Land Info has nationwide coverage of 1:50,000 and 1:250,000 scale topographic maps and 1 arc-second and 3 arc-second DEMs for Mexico. The digital datasets are fully geo-referenced to accommodate use with GPS, GIS, and engineering applications.
